

VPS Hosting Proposal

Chhatak — The Coastal Crunch | Website Infrastructure | 24-Month Plan

Move Chhatak’s website to a dedicated Mumbai-based server — faster, more reliable, and fully owned by the business.

Why We Are Recommending a Migration

The site currently runs on a free-tier cloud host that has four critical limitations for a production e-commerce brand:

Issue today	Impact on the business
Uploaded product images vanish after every restart	Admin re-uploads media weekly. Broken images on live site.
Server sleeps — 30-60 sec cold-start for first visitor	Customer sees blank page → likely bounces before site loads.
Server based outside India (200-300 ms latency)	Slow browsing experience for Indian customers vs. competitors.
Free tier can be discontinued or throttled at any time	No SLA, no recourse if the site goes down.

Four Server Options — At A Glance

We evaluated multiple VPS providers with India-region datacenters. Below are the four shortlisted options, sorted from most economical to most premium.

Option	Provider & Plan	Specs	Location	Monthly*	2-Year Total*
A	Hostinger KVM 1 Entry-level	1 vCPU 4 GB RAM 50 GB NVMe	Mumbai	₹ 599	₹ 14,376
B	Hostinger KVM 2 Recommended	2 vCPU 8 GB RAM 100 GB NVMe	Mumbai	₹ 779	₹ 18,696
C	DigitalOcean Premium Global-standard	2 vCPU 4 GB RAM 80 GB NVMe	Bengaluru	₹ 2,000	₹ 48,000

D	AWS Lightsail Enterprise-grade	2 vCPU 4 GB RAM 80 GB SSD	Mumbai	₹ 1,600	₹ 38,400
----------	-----------------------------------	---------------------------------	--------	----------------	-----------------

**Hostinger rates shown are the current 24-month promotional price (Monsoon Sale). After the 24-month term, Hostinger renews at ₹ 999/mo (KVM 1) and ₹ 1,199/mo (KVM 2). DigitalOcean and AWS bill in USD at flat rates; INR values are approximate at prevailing FX rates. All prices in INR (₹), inclusive of GST where the provider bills in India.*

Detailed Feature Comparison

Feature	A — KVM 1	B — KVM 2	C — DO	D — AWS LS
CPU cores	1	2	2	2
Memory (RAM)	4 GB	8 GB	4 GB	4 GB
Storage	50 GB NVMe	100 GB NVMe	80 GB NVMe	80 GB SSD
Bandwidth included	4 TB/mo	8 TB/mo	4 TB/mo	4 TB/mo
India datacenter	Mumbai	Mumbai	Bengaluru	Mumbai
Dedicated IPv4	Yes	Yes	Yes	Yes
Weekly automated backups	Included	Included	+ ~₹ 400/mo	+ ~₹ 160/mo
Free SSL certificate	Yes	Yes	Yes	Yes
DDoS protection	Basic	Basic	Advanced	AWS Shield
Uptime SLA	99.9%	99.9%	99.99%	99.99%
Support quality	Chat, average	Chat, average	Excellent docs + ticket	Enterprise ticket
Payment method	UPI / Card	UPI / Card	Intl. card only	Intl. card only
Best for	Testing / very light traffic	Production, growing brand	Developer-heavy teams	Enterprise compliance

2-Year Cost Breakdown

All figures include GST where applicable. Prices assume payment for the full 24-month term up-front to lock in the promotional rate.

Line item	A — KVM 1	B — KVM 2	C — DO	D — AWS LS
Server (24 months)	₹ 14,376	₹ 18,696	₹ 48,000	₹ 38,400
Domain (2 yrs, .com / .in)	₹ 1,800	₹ 1,800	₹ 1,800	₹ 1,800
Weekly backups (24 mo)	Included	Included	₹ 9,600	₹ 3,840
SSL certificate	Free	Free	Free	Free
Total infrastructure (2 yrs)	₹ 16,176	₹ 20,496	₹ 59,400	₹ 44,040
Effective monthly cost	₹ 674	₹ 854	₹ 2,475	₹ 1,835

Post 24-month renewal (per month)	₹ 999	₹ 1,199	Flat	Flat
-----------------------------------	-------	---------	------	------

Our Recommendation: Option B — Hostinger KVM 2 (Mumbai)

For a growing D2C snacks brand, Option B strikes the ideal balance:

- 8 GB RAM comfortably handles the site, admin uploads, and future features (blog, more reels, expanding product catalogue) with headroom for the next 2-3 years.
- Mumbai datacenter gives Indian shoppers a snappy sub-40 ms experience.
- Free weekly backups and SSL included — no hidden add-ons.
- ₹ 854 effective monthly cost — less than a single ad-day's spend, for reliable Mumbai-hosted infrastructure.
- Indian billing with GST invoice for clean bookkeeping.

Option A (KVM 1) is viable if the budget is tight, but 4 GB RAM will feel cramped once we add features and the site sees traffic spikes. Options C and D are excellent but 3-4x the cost — the extra spend is only justified for enterprises with strict compliance needs.

Migration Timeline & Delivery

Week	Activity	Deliverable
Week 1	Server provisioning, OS hardening, Nginx + FastAPI + Python setup, staging deployment	Staging URL for client review
Week 2	Data migration (database + all product / reel media), DNS cutover, HTTPS setup, load testing	Site live on production VPS
Week 2 (end)	Client walkthrough, admin handover, deployment script + credentials transferred	Handover documentation PDF + video

Total downtime during cutover: under 30 minutes, scheduled during a late-night low-traffic window.

What The Client Owns After Migration

- Full root access to the VPS — can log in and manage the server directly.
- The domain and DNS records — registered under the client's account.
- All source code, database exports, and media backups — on the client's Git repository and cloud storage.
- Complete handover documentation (admin credentials, deployment script, restore procedure).
- No vendor lock-in — the setup is standard open-source (Ubuntu, Nginx, PostgreSQL) and can be moved to any VPS provider in the future.

Approval & Next Steps

To proceed, please tick the preferred option below and sign. Server provisioning starts within 48 hours of approval and initial payment.

Option	2-Year Investment	Select
A — Hostinger KVM 1	₹ 16,176	☐
B — Hostinger KVM 2 (Recommended)	₹ 20,496	☐
C — DigitalOcean Bengaluru	₹ 59,400	☐
D — AWS Lightsail Mumbai	₹ 44,040	☐
